

Why this report:

The construction sector is one of the most resource consuming sectors. In the last decade several initiatives have been taken to encourage the construction industry to support the agenda of sustainable development and circular economy. This report aims to help building material suppliers to understand contractors' attitude towards sustainable and circular construction industry. This is key for them to design materials, products and solutions as well as to target the right stakeholders in the right market to encourage them to think circular and deliver a more sustainable building environment.

Sustainability and Circularity awareness among European contractors

45%
Actively involved

31%
Actively involved

39%
is sustainability-aware/ non-user

45%
is circularity-aware/ non-user

15%
is sustainability-unaware

21%
is circularity-unaware

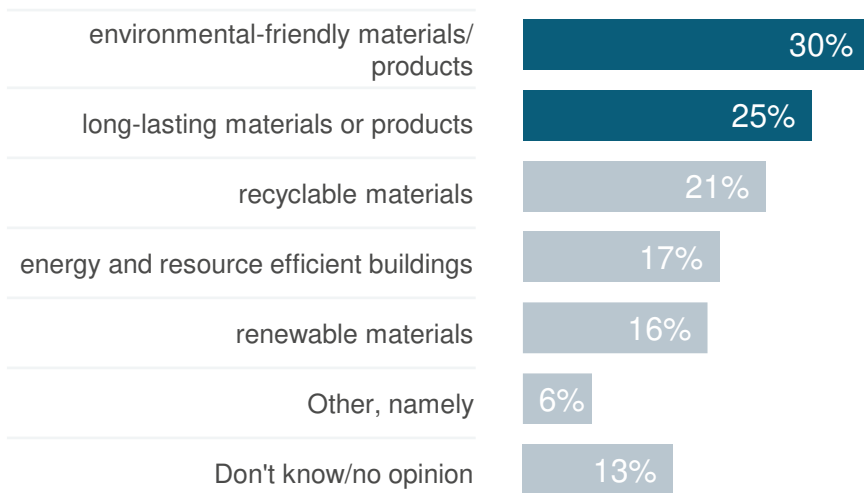

Netherlands
Most actively involved in sustainability

Poland
Unaware of both concept

Perception of **sustainable** construction

Perception of **circular** construction
